Reasons for Allowance

Claims 1-6, 9, 11-22, 24-35, 37-42, 45-53, and 55-58 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Kumagai et al., taken alone or in combination of other references, does not teach or fairly suggest a leakage current control device comprising, among other things, a power reduction logic that is divided into individually enabled portions, each portion having a threshold voltage adjusted for transistors within each respective portion in accordance with the control sequence, wherein the threshold voltage for transistors is adjusted within each respective portion by controlling body biasing of the transistors, as set forth in the claims 1 and 40; one or more look behind inputs to the leakage control circuit, each of the look behind inputs monitoring whether there is data in a prior stage of the pipeline; and a leakage control process that de-energizes one or more current stages if: there is no data in the current stage and each of the look behind input indicates there is no data in one or more of the prior stages, as set forth in the claim 22; and the leakage control circuit that controls power in the functions based on look-behind feedback from upstream functions in the data path, as set forth in the claim 58.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
